www.TheManagedMunicipality.com

January 24th, 2022

Township of Dubreuilville
23 Pine Street
PO Box 367
Dubreuilville, ON
P0S 1B0

As you are aware, the Province is moving toward a 'digital by default' standard for municipal data and, like many other rural municipalities, Dubreuilville needs an action plan to consider transition. Implementing a digital record system will improve staff efficiency, bring consistency to processes, increase security and backup capabilities, make appropriate data available to the public easily, and will save significantly on space.

Enclosed please find our final review of the municipal office's existing IT structures, provided as a step toward the implementation of a full digital record management system. The changes proposed in the following include – where possible – a conservative calculation of savings generated, and a rough budget figure for planning purposes along with a timeline typical for implementation projects of this nature.

We would anticipate that staff and/or Council may have questions regarding the enclosures or may wish assistance with preparing a funding application through the current Municipal Modernization Program. We would be pleased to participate in any discussion where our assistance is deemed appropriate.

Dubreuilville was approved for a full report funded entirely by the Province under MMP's "Intake 2". Assuming all our recommendations are implemented, the budgeted share of cost for Dubreuilville would come to \$ 38,645.00 – the Province provides the remaining 75% of the balance necessary to complete the work. That shared investment would yield an efficiency and security benefit of nearly \$ 375,000 in the next five year span; a greater than 9:1 return on funds invested.

We appreciate the opportunity to work with the Township on this important transition and look forward to speaking with you further at your convenience.

Regards,

Mark Anderson
MMP Project Lead
(705) 562-5477 Direct

Executive Summary

Background

Rural and northern municipal governments in Ontario are increasingly challenged to meet the expectations of their citizens and the requirements of the upper tiers of government. The provincial government of Ontario has recognized the pressing need for additional resources by providing the *Municipal Modernization Program*. Under this program, rural and northern municipal governments can pursue funding to improve efficiencies and/or reduce costs; this report provides recommendations that, if adopted under the *MMP*, will do both.

The main body of this report is organized on a recommendation-by-recommendation basis – each section including rationale, anticipated budget needed, expected savings / productivity outcomes and additional related reference materials for those who wish a deeper understanding of the issues involved.

An executive summary is included to provide a brief non-technical overview of the municipality's current technology status and goals and to summarize the anticipated budget required to fully implement the recommendations listed. The intention of all proposed items is to position the municipal office to function securely at peak IT efficiency over the next five years. Costing and anticipated savings are structured over a five year window.

Also included are suggested technical requirements for any eventual RFP to be issued for services or products proposed in the following. Additional questions may be addressed to the study's authors; Council presentations are available as desired to further clarify the findings and recommendations presented.

General Recommendations

- Municipal office status – main office
- Add new record management solution
- Replace and/or upgrade existing PCs
- Upgrade existing router to a corporate-grade firewall appliance
- Install desktop scanners for primary users
- Replace / identify / test all network cabling / rackmount
- Upgrade security software
- Automate standard processes to match bylaw / policy
- Create policy / structure for remote work
- Add digital tools for Council(s)
- Complete security and record management training

Costing Summary

This summary is predicated on a five year window of time (including subscription licensing) after which additional upgrades / licensing / other changes should be considered. All costs and savings shown are based on five years:

Description	Budget	Savings
Municipal office (storage space upgrade for server)	\$ 7,100.00	
Record Management:		
Basic	\$ 51,900.00	
Including Backlog Scans	\$ 101,400.00	
Including Backlog & Custom Programming	\$ 107,400.00	\$469,783.00
New PCs	\$15,325.00	\$12,500.00
Desk Scanners	\$ 5,480.00	\$9,333.00
Cable Cleanup / Rackmount	\$ 3,600.00	
Security Software Suite (5 Years)	\$ 5,000.00	\$10,000.00
Standard Templating of All Provided Forms	\$ 6,000.00	\$ 17,500.00
Council Tools (iPads)	\$ 4,674.00	\$ 9,900.00
Total Outlay (assumes full record management option)	\$ 154,579.00	\$ 529,016.00

We anticipate a net savings in time and material over the five year lifespan of the solutions proposed totalling \$ 374,437.00.

Recommendations

Municipal Office Status

The network currently in place at the municipality's office is configured as a domain-based network and runs on a central 'server' computer that is responsible for security, backup and other core functions of the network. The current server is very recent but needs additional rapid storage space for the backlog of scanned documents intended.

The municipality's current network server needs the following changes:

- 4 x SAS 2 Terabyte Hard Drives (Hot Swappable for Lenovo Server)
- SAS RAID Controller with 2Gb Battery Backed Cache

RFP Proposed Hardware Specifications

RFP Technical Services Needed

- Install server drives
- Install RAID controller
- Configure RAID array for document storage

RFP Estimated Budget Allocation

Expected storage drive costs	\$3,200.00
Expected RAID controller costs.....	\$1,900.00
Expected services cost	\$2,000.00
Total server project anticipated budget	\$7,100.00

Add New Record Management Software

The municipal office is currently driven by paper-based processes. Even in cases where digital files have replaced paper, the lack of a central repository for data results in wasted time daily searching for the current version of documents. The existing distribution of municipal data and the reliance on paper files creates multiple challenges / vulnerabilities and will increasingly hamper growth and efficiency efforts if left unaddressed.

AMO reports that the Province of Ontario is pursuing a 'digital by default' as rapidly as possible¹. The expectation is that even smaller municipal governments will be able to provide virtually any detailed data in digital format responsively – absent record management, this is an unrealistic hope. Despite this, future funding opportunities for all municipalities will depend on the provision and availability of municipal data to both the public and the province with a flexibility and speed that are impossible with paper-based systems.

Moving to 'digital by default' where possible will reduce storage costs, improve efficiency, increase transparency, collaboration, and responsiveness for residents; a record management system also has the 'green' benefit of reducing waste along with paper and toner consumption and cost.

Identified document-related issues at the office include the following:

- Significant time lost searching for the location of current versions of documents.
- Significant space dedicated to archival file storage.
- No 'backup' copies exist of many physical documents – single copies are vulnerable to loss in multiple ways – fire, theft, accidental destruction, misfiling.
- Difficulty fully sharing public-access documentation – something that is increasingly desirable/demanded via website access.
- Inconsistency of processes with little or no audit-trail.
- Inability to rapidly respond to [MFIPPA](#) requests or subpoena/discovery demands – especially as regards email communication.
- Inability to work remotely with broad access to paper files stored at the municipal office – increasingly an issue in the Covid / remote-work era.
- Inability to quickly search both title and full-text content of broad document types.
- Inability to centrally secure confidential documentation with audit trail for all access, alterations and attempted deletions.
- Limited ability to collaborate effectively on project documentation across all municipal departments and sites.

¹ <https://www.amo.on.ca/AMO-PDFs/Reports/2017/OnMuni-Online-Towards-Digital-Transformation-2017.aspx>

- Inability to rapidly assemble, approve and distribute meeting packages for Council members – this is a significant consumer of staff time monthly given the need for regular and special meetings / agendas / reference documents.
- No enforced consistency in document naming, storage location or file type.

RFP Record Management Software Specifications

Given the limited speed of internet access at the municipal offices and no immediate prospect of upgraded speeds, we are recommending an on-site solution rather than a cloud-based solution. The ideal on-site solution for the municipal office would have the following minimum capabilities and features:

- Rapidly search document titles, full text contents and other metadata of common municipal document types including but not limited to: Word, Excel, PowerPoint, Adobe Acrobat / PDF, Rich Text, Plain Text.
- Store and search all inbound and outbound municipal email.
- Securely publish documents to a website including Agendas, Minutes, Council Packages, Bylaws and other common municipal data types.
- Conform fully with all existing and pending Canadian regulations for data storage and privacy.
- Support for the adoption of the “TOMRMS” (The Ontario Municipal Record Management System) filing structure
- Integrate with an existing ‘Active Directory’ network.
- Common controls accessible directly through existing Windows tools – Word, Excel, PowerPoint, Outlook and File Explorer.
- Support for customized automated workflows for common municipal functions – applications, complaints, permits, purchases etcetera, including approval steps and publication steps.
- Associate customized metadata with documents stored.
- Retention and destruction rules by folder or individual document.
- Versioning of common documents.
- Simply reported audit trail for all stored documents.
- Internet accessibility for public documents with anonymous login / no login.
- Optional internet accessibility for non-public documents with secured login by user.
- Store large backlog of searchable pdf documents (100,000 +).
- Bulk uploads of existing paper-based documents.
- Custom integration with other municipal software tools is desirable.

RFP Estimated Budget Allocation

There is a broad range of software tools exist that satisfy the above requirements, making highly precise budget allocation difficult. We have opted to cost out a solution satisfying the above feature and function requirements from a common record-management vendor, [Columbiasoft](#), who provide their products to a number of similarly sized municipal governments across Canada and the US. We believe most record management vendors who satisfy the above requirements will be similarly priced over a five year amortization period:

8 x Annual subscription cost per user @ \$ 440.00	\$ 3,520.00
3 x Annual subscription cost <i>per server</i> (main, web, email) @ \$ 440.00.....	\$ 1,320.00
1 x Annual Email archive licensing @ \$ 580.00.....	\$ 580.00
10 x Annual Webview licenses (for public access) @ \$ 140.00	\$ 1,400.00
5 x Annual Webview licenses (for Council / Mayor use) @ 140.00.....	\$ 700.00
2 x Annual WebTools licenses (Public Works / Firehall use) @ \$ 330.00	\$ 660.00
Annual cost for software licenses	\$8,180.00
Total licensing costs extended over 5 year amortization period.....	\$ 40,900.00²

Any solution implemented will require significant time to install and configure along with the ongoing need for employee training and long-term support:

On-site server configuration including client software install.....	\$ 3,500.00
Basic user training (1 day / 8 users).....	\$ 4,000.00
Advanced user training – delivered via Zoom / VPN (1 to 2 users)	\$ 3,500.00
Total training and deployment cost	\$ 11,000.00

Optionally, there will also be – regardless of the solution implemented – a cost associated with scanning and uploading the existing backlog of documents. We have allocated budget to those anticipated costs as follows:

Document Backlog – Approximately 2,500 pages per box / filing drawer.

Cost per box for scan-to-pdf services³ – \$ 450.00

Box equivalents currently on site – 110 (total pages – 275,000)

Backlog scanning cost (prior to shipment charges)	\$ 49,500.00
--	---------------------

² Quoted total includes direct support from vendor for the full five year term for all user support, software upgrades and fixes / new versions.

³ Estimate provided by [Blue Pencil](#) assuming clean unstapled cost per standard banker's box of documents, not including shipment to scanning facility in Oakville, ON.

The training provided during the “advanced” session shown above is sufficient to enable a municipal employee to create customized workflows that will automate many of the existing municipal paper-based processes and, in so doing, to add additional ROI savings beyond those listed below. Optionally, the municipality may elect to have their workflows modeled for them by the vendor at a cost of \$ 150 per hour for developer time.

Record Management System Basic..... \$ 51,900.00
Includes all licenses, training and support for a 5 year term

Record Management System Enhanced \$101,400.00
Includes all licenses, training, support and backlog scanning for a 5 year term

Record Management System Complete \$ 107,400.00
Includes all licenses, training, support, backlog scanning and workflows⁴ for a 5 year term

ROI Savings

There are multiple ROI calculators available from a variety of sources. We have used the simplified calculator available [here](#) and the following estimates to calculate basic raw ROI for the municipal office:

- Number of staff who routinely file/retrieve documents: 8
- Average number of files retrieved or returned per employee each day: 15
- Number of file cabinets or equivalent spaces: 35
- Approximate cost per square foot for office space: \$ 10
- Average hourly salary⁵: \$ 35.00

Total estimated annual ROI: \$93,956.60

Total estimated ROI over the five (5) year projected period: \$469,783.00⁶

⁴ Workflows completed in this cost include all custom workflows for all documents provided by the municipality that are attached to this proposal as addenda.

⁵ Listed hourly salary is based on conservatively-averaged public municipal wage data from a variety of sites including www.neuvoo.ca, www.indeed.ca and www.amcto.com. Salary is an approximation and does not necessarily reflect actual costs at your municipality.

⁶ Total listed does *not* include value derived from increased efficiency, reduced need for additional staff, paper/toner savings, workflow automation; it is solely the savings available from space and time reduction for existing staff.

Replace or upgrade existing PCs

There are several PCs in the network that are rapidly aging (5 units).⁷ There are several reasons to strongly consider immediate replacement for these units:

- As systems age, components are increasingly prone to failure due to wear. On systems that are more than five years old, parts are unlikely to be readily available. So not only are system failures more likely and common on older computers, they will also take longer to repair given the likelihood that local technical support will not have parts in stock and may not be able to readily acquire parts on short notice.
- Older systems have often had multiple different software tools installed and then removed, many have experienced malware infestations, virus issues, failed patch installations and other unwanted events over the course of their daily use. Each of these events can leave unwanted digital residue that not only impedes a system's performance, but can also mean a system is less secure than a modern equivalent with a 'clean', modern and fully-patched operating system.
- System performance has improved dramatically over the last decade – processors have gained additional speed and the addition of reasonably-priced “SSD” drives has dramatically improved general computer operations. New computer systems with SSDs, modern processors and faster memory can start from an off condition and be fully operational for a user within fifteen seconds or so. The performance difference between a ten year old system and a modern computer yields an additional 12 hours of available productive time per year per employee in startup time alone.⁸
- Beyond the performance benefits, maintenance costs of older PCs are an often hidden cost. Intel's “How Much Old PCs Cost”⁹ report states the following:

“A global survey of 736 small businesses in six countries found that the cost to repair an older PC equals or even exceeds the cost of buying a new one. The study reveals that small businesses are spending an average of US\$427 per PC that is 4 years or older on repair costs, which is 1.3 times the repair cost for a PC that is less than 4 years old. Similarly, the cost of upgrading an older PC is 1.6 times the cost of upgrading a PC that is less than 4 years old. This does not include the cost of lost productivity when employees are without their computers...”

For this reason we are assessing a very conservative rough cost of \$ 500 CDN per year that PCs older than 2016 are kept in use – those figures are reflected in the ROI calculations provided above.

⁷ Hardware specifications for each computer are attached as addenda.

⁸ J.Gold Associates 2018 – <https://www.intel.com/content/dam/www/public/us/en/documents/reports/sme-pc-study-report.pdf>

⁹ <https://www.intel.com/content/dam/www/public/us/en/documents/articles/pc-upgrade-old-pc-costs-article.pdf>

As a general rule, for the above reasons we recommend you strongly consider upgrading any desktop PC older than four years. With Windows 11 needs in view, you may want to consider upgrading even newer systems within that time window.

RFP Hardware Specifications

5 x Desktop Computers As Follows:

- Must ship with Windows 10 or 11 Professional Edition license
- Must feature Intel i5 or i7 Processors – preferred 10th or later generation models
- Minimum 16 Gb RAM with available (open) expansion slot(s)
- Must support dual monitor operation
- Must have 240 Gb or larger SSD drive – preferred “NVMe” format
- Must have 3 year or longer hardware warranty coverage
- Must be “Tier 1” equipment – Lenovo, HP, Dell.

Optional

- Cost for Microsoft Office 2019 Standard Edition
- Cost for 24” and 27” monitors (preference given to low eye-strain options)

1 x Notebook Computer As Follows:

- Must ship with Windows 10 Professional Edition license
- Must feature Intel i5 or i7 Processors – preferred 10th generation models
- Minimum 16 Gb RAM
- Must have 240 Gb or larger SSD drive – preferred “NVMe” format
- Must have 1 year or longer hardware warranty coverage
- Must have 14” or larger display
- Must have onboard Bluetooth capability
- Must include a USB-C port that can transmit power
- Must be “Tier 1” equipment – Lenovo, HP, Dell.

Optional

- Cost for Microsoft Office 2019 Standard Edition
- Cost for 24” and 27” monitors (preference given to low eye-strain options)
- Cost for USB-C Docking station capable of powering the notebook
- Cost for Bluetooth keyboard and mouse combination

RFP Technical Services Needed

- Deliver and setup PCs
- Migrate existing PCs’ data and applications to new PC
- Install new Office version as needed

RFP Estimated Budget Allocation

As of this writing, multiple vendors are offering Tier 1 systems meeting the above specifications at the following costs. We have opted to cost out a standard desktop Lenovo system with 3 year warranty that meets the above specifications fully. We have also provided a budget estimate for a notebook system including dock as described above. We do not expect costs to increase prior to RFP issue in 2021 / early 2022:

Desktop Systems Cost Estimate

5 x Lenovo ThinkCentre M720q Model i7-10th Generation @ \$ 1,850.00 = \$ 9,250.00

5 x Microsoft Office 2019/2021 Standard Edition @ \$ 300.00 = \$ 1,500.00
 5 x 24" Widescreen ThinkCentre Monitor @ 270.00 = \$ 1,350.00
 5 x Delivery and Setup (data migration / domain join) @ 155.00 = \$ 775.00
 Total for Desktop Upgrades As Described Including Listed Options \$ 12,875.00

Notebook System Cost Estimate

1 x Lenovo ThinkBook 15-IIL Model 20SM009HCA @ \$ 1,240.00
 1 x Lenovo USB-C Docking Station @ \$ 290.00
 1 x Lenovo 24" Widescreen Monitor @ 270.00
 1 x Microsoft Office Standard @ \$ 300.00
 1 x Lenovo Bluetooth Keyboard and Mouse Combo @ \$ 145.00
 1 x Delivery and Setup (data migration / domain join) @ \$ 155.00
 1 x Basic Travel Case @ \$ 50.00
 Total for Notebook As Described Including Listed Options \$ 2,450.00
Grand Total Suggested RFP Budget \$15,325.00

Desktop Scanners

Implementing a digital record storage solution will significantly reduce the need for paper production within the office – especially large volume print jobs such as agenda packages.

However, many residents and supplier firms will continue to mail or otherwise deliver paper based documents. Moving to a digital system – as the Province mandates – will necessarily mean that staff will benefit from a rapid way to turn paper-based records into digital records quickly and efficiently.

A single large scanner/printer/copier at the office is shared by all office users and is critical to the preparation of agendas and other large / colour documents. While we expect the office to move toward electronic distribution of more and more digital documents – resulting in less need for shared copier services – other features of a shared unit will become more vital to office productivity in the coming years. The ability to scan documents quickly and reliably into electronic format for long-term storage / search or transmission to residents will become vital very quickly as the office migrates to digital transmission and storage of more material. A small purpose-specific scanner at selected desks will encourage rapid adoption of a digital standard and will increase overall office efficiency.

RFP Specifications

- 8 x Desktop Scanners
- Preferred Vendors: Fujitsu, Xerox, Kodak
- Support for multiple scan sizes up to legal
- Document feeder (30 pages or better)
- Scan speed of 60 IPM or better
- Programmable buttons / screen for direct input to network share
- Scan to text-readable PDF
- USB connection

Our experiences indicate that a small desk based scanner will encourage user adoption of a digital standard for several reasons:

It will make it extremely quick and simple to add paper documents to the record management system.

It will not require a user to interrupt their workflow to get to a shared copier/scanner.

It will not ever require waiting because the shared scanner was in use.

We have assumed a 2 minute saving per document from the availability of a desktop scanner. Given a volume of 8,000 total paper documents over a five year term, that equates to 266 hours of staff time saved – an ROI of roughly \$ 9,333.00 as indicated above.

RFP Suggested Budget Allocation

We have obtained cost on a Fujitsu Scansnap ix1500 model meeting or exceeding the above specifications¹⁰

8 x Fujitsu ScanSnap ix1500

60 IPM

50 Page Sheet Feeder

600 DPI Resolution

11.5" x 6.3" x 6.0" Size (desk suitable) @ \$ 685.00 = \$ 5,480.00

¹⁰ Detailed ScanSnap specifications attached as addenda.

Replace / identify / test all network cabling / rackmount

The existing network cabling at the office has been built up over a period of years and has been added and modified as needed. The existing cabling supports multiple PCs, printers and various devices and terminates in a small closet / under a desk.

- When problems arise, they are difficult to resolve quickly; significant time can be spent tracing back a single cable run to its source.
- Cable runs vary in cable-type and speed; the network is inconsistent in speed and reliability as a result.
- Cables that are not run cleanly and securely can be found under chair rollers, furniture legs and otherwise enduring damage that interrupts or breaks network connections and ultimately create downtime.
- Loose cables present tripping hazards to staff and visitors.

We recommend replacing the existing cable runs entirely, new cables to be run inside walls / above ceilings where possible and installed in raceways if necessary. All cables should be brought back to a single central point. All cables should be labeled clearly at both ends for ease of identification and, at the server end, cables should terminate in a patch panel.

RFP Hardware Specifications

- 2 x 1,000' Rolls of CAT6 Solid Core Cable (CMP / Plenum)
- 1 x 24 Port Patch Panel (rack / wall mountable)
- 6 x Dual Port Surface Mount CAT6 Wall Jacks
- 1 x 16-port Managed Gigabit Network Switch (Layer 2 preferred)
- 16 x 1' CAT6 patch cables (switch to patch panel connection)

RFP Technical Services Needed

- Remove former cable runs
- Mount patch panel and network switch (wall or rack mount)
- Install 12 runs of varying length in small office (max of 50')
- Install 6 dual outlet wall mount boxes
- Terminate cables at wall mount boxes and patch panel
- Label wall mount box and patch panel connections clearly
- Connect patch panel to switch with provided patch cables
- Test all cable runs for speed and connectivity

RFP Estimated Budget Allocation

We would expect each cable run to take no more than an hour of labour to install, terminate and test. In addition, the hardware components are all common and broadly available from multiple vendors and sources. We are suggesting a budget that should allow a competent contractor to complete the work appropriately:

2 rolls of CAT6 cable, 24 Port Patch Panel, Jacks, Patch Cables (estimated)	\$ 1,600.00
Managed Layer 2 16 Port Gigabit Switch (estimated)	\$ 600.00
On-site Labour (14 Man Hours Estimated)	\$ 1,400.00
Total Budget Suggested	\$ 3,600.00

Upgrade security software

The municipal office currently runs on the default Windows security tools. These tools provide basic protection against common virus and malware infections but cannot be centrally controlled and monitored; in an ideal model, security software would be automatically applied to workstations on the network and would be managed by the file server.

Absent central control, it is possible for a single user to accidentally remove or disable protection and thereby introduce malware into the local network.

In light of the increasing prevalence of ransomware and the specific targeting of Canadian municipal governments¹¹, we strongly recommend a corporate-grade security software tool that will reduce the possibility of ransomware attack and will allow for remediation – in many cases even after a ransomware launch inside the network.

RFP Software Specifications

- Centrally managed security software for up to ten systems
- Preferred vendors: Sentinel One, Symantec, Kaspersky, Trend Micro
- Ransomware rollback or similar feature
- Renewable annual support and updates

RFP Estimate Budget Allocation

We would anticipate the annual cost for a security tool sufficient to provide coverage on all network connected devices to be available at an annual cost below \$ 1,000.00. A five year window of coverage for all devices should amount to less than \$ 5,000.00

According to a Varonis survey, the cost of even a single ransomware infestation is increasing rapidly – between 2018 the average ransom demand was \$ 5,000. Currently, average demands have increased to more than \$ 200,000.¹² Further, the same study shows that last year, more than one third of businesses experienced a ransomware attack.

While being exact about how much a security solution can save over a five year windows, our municipal experience here in Canada indicates that municipal governments in particular are targets of these attacks at an accelerated rate. We have therefore conservatively assessed a ‘savings’ of \$ 5,000 per incident and conservatively assumed two (ideally thwarted!) attacks for your municipality in the next five years. Those savings are reflected in the ROI calculations above.

¹¹ https://www.datto.com/resource-downloads/Datto2018_StateOfTheChannel_RansomwareReport.pdf

¹² <https://www.varonis.com/blog/ransomware-statistics-2021/>

Automate standard processes to match bylaw / policy

The municipal office uses multiple forms to manage annual operations. A partial list of those forms is shown below – amounting to more than thirty (30) individual documents that are used approximately 600 + times in the course of a single year – or a minimum of 3,000 documents filled out by various personnel in the course of a five year cycle.

It is possible to create digital templates of these documents and to model standard document processes within record management software. These automated processes modeled inside a record management system (see recommendation 2 above) will enhance municipal operation in several ways:

- **Efficiency** – Given the large number of forms completed (3,000 +), significant time will be saved in finding, handwriting, processing and filing these forms. While there is a broad range of forms, given that each will need to be manually completed, processed and usually filed, we have assessed a very rough metric of 10 minutes per form. 600 forms annually yields a saving of 100 hours per year – \$ 17,500 in savings over five years.
- **Consistency** – multiple different versions of the same form will no longer be possible. Forms and information collected will be completely consistent regardless of which employee completes the form. Forms can also be automatically routed to the appropriate municipal personnel for follow up / auditing.
- **Convenience** – Templated digital forms can be made available to the public without a visit to the office; all forms that the public need to complete can be distributed via the existing website, increasing convenience for residents or potential residents.
- **Cost** – Digital templates for common forms mean less paper consumption, less toner use, less wear on existing equipment.
- **Connectivity** – Digital forms, and the data those forms contain, can be rapidly shared with Provincial or Federal levels of government. Since future funding will increasingly depend on the municipality's ability to provide data of all sorts quickly, the ability to accurately and quickly extract data is becoming vital.

NB: The following page is provided as an example of typical form usage in a small / mid size municipality and may not represent Dubreuilville's experience – precise details of form usage frequency were not available at the time of report creation.

Document	Responsibility	Qty/Yr	Time Needed	Other Parties
Complaint Form		10		
Building Permit		3		
Septic / Sewage		3		
Cemetery Sign Off		2		
Time Sheet – Public Works		26

RFP Requirements

(Requires record management system selection as outlined in Section 2 above)

- Create digital templates of provided forms (see list above)
- Install templates within record management system and add basic routing functionality

RFP Estimated Budget Allocation

In a modern record management system, tools exist to speed the creation of even complicated forms. We would therefore expect most forms to require roughly two hours of developer time to complete.

ROI Savings

60 hours of developer time @ \$ 100/hr	\$ 6,000.00
ROI anticipated	\$ 17,500.00 over five years
Net ROI	\$ 11,500.00

Create policy / structure for remote work

It is possible to secure the municipal office network in such a way that hacks and intrusions are limited and – ideally – entirely prevented. However, when access to the network is extended beyond the physical office location and remote work is necessary, security measures can become inconsistent and create risks.

Given the current pandemic being experienced across the globe, the need to enable work remotely has been wisely emphasized. This current crisis may pass in time, but others – both local and global – are certain to arise. We would therefore recommend the creation of a policy and technical framework around the remote work that will inevitably be necessary at points. This would consist of two aspects: Council policy and technical infrastructure.

Council may want to consider implementing at least the following:

- No remote access to the corporate network allowed outside the use of an approved VPN.
- No use of USB flash drives or other media to move files from home to the municipal office.
- Only corporate notebooks allowed to connect remotely; no use of home machines or other devices not owned and managed by the municipality.

Technical staff or subcontractors should implement the following:

- Emergency notebook (Recommendation 3 above) to be configured with VPN solution suitable to connect to corporate firewall securely (Recommendation 4 above).
- Emergency notebook to be configured with corporate anti-virus / anti-ransomware / monitoring solution (Recommendation 7 above)

Add Digital Tools for Council(s)

Currently, individual Council members receive printed agenda packages prior to every Council meeting. These packages are often extremely large and can be hundreds of pages long. Each package is given to each councillor for each municipality at least once a month – barring special meetings or emergency sessions which would also require paper-based distribution. In the case of the municipal office in question, that work is multiplied four times over, for each of the four maintained municipalities' needs.

There is a significant amount of time spent in preparing, copying, collating and delivering these agenda packages to Council members. Office staff report an average of four hours per agenda, solely in the copying, collating and distribution phase. This amounts to a minimum of sixteen hours per month or two full man-days of simply moving paper. Adding weather-based delays in delivery time, special meeting needs and the supply cost of toner and paper, the expense associated with Council meeting agenda preparation is substantial.

In conjunction with recommendations 1 and 2 above, equipping Council with tablet computers and using those tablets to distribute agenda material digitally would provide two immediate benefits and would enhance the office staff's ability to deliver agendas in a timely and accurate fashion:

- Immediately eliminate at least four hours of staff time monthly.
- Immediately eliminate the cost of printing roughly 6,000 pages per year
- Council members would receive agenda material earlier than previously provided – usually within moments of the agenda being finalized, rather than hours or days.
- Office staff would have the ability to update the agenda at anytime prior to the formal meeting's beginning to address potential errors or omissions.
- Council members could use the same devices to connect to video conferences of all kinds – Council meetings or other – during Covid 19 or similar emergency situations.

RFP Hardware Recommendations

- 6 x Apple iPad with minimum 10" screen (Council, Mayor, Clerk, Spare)
- 64 Gb of storage or more
- WiFi networking
- Camera and Microphone
- Ability to voice record memos
- Optional engraving feature preferred ("Property of ...")

RFP Technical Services Needed

Staff may be able to perform basic iPad setup without assistance. iPads would need to be configured as follows:

- Corporate email assigned to each Council member & Mayor
- Email address connected to each Councillor’s iPad
- Dropbox or similar sync’ing service installed and configured
- Zoom conferencing installed and configured (free version is sufficient)
- Basic training for each Council member on use and care

RFP Estimated Budget Allocation

The cost of a basic iPad can be known with precision – Apple offers only a single fixed price and does not discount through vendor channels. Various models are available but a suitable product would be as follows:

6 x Apple iPad Air with 10.9” Screen and 64Gb RAM¹³ @ \$ 779 = \$ 4,674.00

ROI Savings

Assuming a five year life with a new iPad, a cost analysis would be as follows:

Total paper-based staff time over four years ¹⁴	\$ 8,400.00
Cost of paper and toner over five years ¹⁵	\$ 1,500.00
Less Project Cost	(\$ 4,674.00)
Net ROI	\$ 5,226.00

¹³ Includes one unit for all Councillors and Mayor. Detailed specifications attached as addenda or at <https://www.apple.com/ca/ipad-air/specs/>

¹⁴ 4 hours per month x 60 months x \$ 35/hr

¹⁵ 30,000 sheets (100 sheets per Council meeting x 60 meetings x 5 copies @ 5 cents per page)

Standard Forms Considered

The following table outlines forms initially reviewed which should be made available for recurring use within a digital record management system. This list may not be exhaustive and additional discovery should be anticipated within any successful tender response / budget allocation.
